

# 4 Pillars of ISO 9001:2015 Compliance

Precision and accuracy are both critical in the field of optical coatings and components. Failures at any point during design, development, or manufacturing put your vital medical, scientific, automotive, satellite communications, or defense systems at risk.

Full compliance with the **ISO 9001:2015** standard helps minimize adverse incidents and improve overall operations.

## Unity of Purpose:

From the manufacturing floor to the C-suite it's important that everyone commits themselves to better communication, coordination, and resource management. This facilitates better, safer, and more organized operations.

## Commitment to Quality:

Industry-standard best practices, use of certified raw materials, a highly skilled workforce and redundant QC procedures ensure optimal product quality and functionality.

## Evidence-based process:

Success stemming from poor processes isn't sustainable. Instead, consistently base operations on sound practices informed by empirically valid data derived from past successes.

## Continual improvement:

Stagnation is inimical to innovation—hence ISO's inclusion of improvement as a key 9001:2015 quality management principle. Don't settle for simply correcting flaws but also commit to fortifying existing strengths and creating new advantages through consistent innovation.

Dynasil's efforts to **achieve and maintain compliance** with the ISO 9001:2015 standard demonstrate our rigorous pursuit of quality and commitment to continual improvement of business processes, enabling us to deliver the highest level of quality and efficiency. The certification is an essential ingredient in our mission to deliver innovative products and solutions.
